ecamos Core Strategy 1X

May 2019

Manager comment

The ecamos Core Strategy progressed in May, its 1X version closing the month at 0.86%. The SG CTA Index and the Swiss Market Index posted performances for the same period of respectively -2.39% and -2.52%. Over the last 12 months our strategy returned 1.12%, whereas the trend following index and the equity benchmark show corresponding performances of 1.52% and 12.62%. Still over the same one year time horizon, the three portfolios exhibited respective annualized volatilities of 10.68%, 7.29% and 13.40%. During the month of May, S&P 500 E-mini Europe Option futures proved to be the best performing market with a contribution of 0.69%, while VIX CBOE futures lay at the other end of the spectrum with an attribution of -0.28%. General risk taking, expressed by the margin to trading level ratio, increased from 10.39% to 13.24%.

¹From 1 August 2011 until 12 December 2014 returns correspond to real traded figures of the ecamos Core Fund USD class, adjusted to 1% management fee. Returns are subject to 20% performance fees. Since 17 December 2014 returns reflect the results of an investible UCITS V vehicle. Performance data is shown net of fees with income reinvested.

*The SG CTA Index provides the market with a reliable daily performance benchmark of major commodity trading advisors (CTAs). The SG CTA Index calculates the daily rate of return for a pool of CTAs selected from the largest managers that are open to new investment. Selection of the pool of qualified CTAs used in construction of the Index will be conducted annually, with re-balancing on January 1st of each year. A committee of industry professionals has been established to monitor the methodology of the index on a regular basis.

Investment philosophy

The ecomas Core Strategy aims to achieve substantial medium to long term capital appreciation by employing a diversified portfolio of quantitative investment strategies based on economic rationales. Its main driver consists of a unique model combining trend following and mean reversion into a single concept, which is implemented globally across more than 75 highly liquid futures markets spanning all asset classes (equities, interest rates, bonds, currencies and commodities). The addition of several satellite strategies further increases portfolio stability and results in a generally uncorrelated risk-return profile.
